DYS Camp Families,

At DYS, we strive to make our camp the best experience it can be for your camper to engage with others and encourage independence in diabetes care. This summer, we will be piloting a new software utilizing electronic medical records at camp, both resident and day. By utilizing this new system called CampViews, we are incorporating smart devices such as tablets to manage both the check in and out process, record all blood sugars, track daily medications, and overall improve the camper experience. All camper information will be viewable on the camp issued smart devices given to our medical staff so there will be no lag in retrieving data. In addition to recording camper information, this new system also has the capability to follow Dexcom CGM data, so we can remotely monitor blood sugars.

If your camper uses a Dexcom CGM the medical staff will be able to view their blood sugar from the smart devices. To utilize this function the following is needed:

- Your camper will need to arrive at camp with their cell phone to use as a receiver.
- Any camper using Dexcom Share will need to turn the function off at check-in.
- You will need to have your Dexcom log-in information at check-in.
- You will need to review the new Cell Phone Policy with your camper and sign it.

**Note:** We understand that some campers may not have a smart device receiver/do not have an updated phone for their Dexcom. We have secured a few phones for your camper to borrow during their time at camp, please contact Cindy to see if this is still available for your camper.

Fingerstick checks will still be the standard for checking blood sugar at camp and all blood sugars will be recorded in CampViews. Though CampViews is only integrated with Dexcom at this time, all campers that use a cell phone as a receiver for any other CGM are welcome to bring them to camp and will follow the same Cell Phone Policy.

If you have any questions about this or any other camp medical questions, please contact our Medical Director Lisa Richards. Thank you and we look forward to seeing you at camp!

# Hot Shots Camp Phone Policy

Updated May 2022

Diabetes Youth Services strives to educate campers on embracing new technology and to utilize current diabetes management techniques to the best of their ability. To best monitor diabetes technology at camp there are guidelines. The following must be done to ensure the safety of the camper and the technology at camp.

- ONLY CELL PHONES USED AS A CGM RECIEVER OR READER WILL BE ALLOWED AT CAMP.
- During check-in at camp, cell phones will be placed in a locked bag and will be the responsibility of the camper. Both counselors and clinicians will be able to unlock phone bags at any time to review CGM data. We will ask that all social media app notifications, messaging notifications, and personal alarms are turned off at time of check-in. We will also temporarily change the passcode to be able to access the CGM data more easily during midnight blood sugar checks.
- Anyone who uses Dexcom Share or LibreLinkUp the function of "Sharing" **WILL BE TURNED OFF** at check-in and under no circumstance be turned back on while at camp.
- If you gather your CGM Data from your phone all data will be available in its entirety from the Dexcom Clarity or LibreLink App following the conclusion of the program.
- Phones will *not* be used at camp for the following: calls, texts, access to the internet, or access to social media. Phones will not be used for any other purpose other than the use of a receiver for the camper's CGM. All dosing and decisions that are made are backed up by a fingerstick BG. CGM may be calibrated if reading is off by a noticeable amount.
- Phone will be returned to parent/Guardian at the conclusion of camp.
- Failure for campers and/or parents to follow these rules will result in confiscation of cell phone and can also result in removal of camper from camp.
- **If cell phone is lost, stolen or damaged at camp there is no liability to Diabetes Youth Services for replacement or repairs.**

By signing below, I confirm that I understand and agree to the above Cell Phone Policy and agree to abide by its rules.
